Software Used in this Lab

In this lab, you will use an [IBM Db2 Database](#). Db2 is a Relational Database Management System (RDBMS) from IBM, designed to store, analyze and retrieve data efficiently.

To complete this lab you will utilize a Db2 database service on IBM Cloud. If you did not already complete this lab task earlier in this module, you will not yet have access to Db2 on IBM Cloud, and you will need to follow the lab below first:

- [Hands-on Lab : Sign up for IBM Cloud, Create Db2 service instance and Get started with the Db2 console](#)

Database Used in this Lab

The database used in this lab is an internal database. You will be working on a sample HR database. This HR database schema consists of 5 tables called **EMPLOYEES**, **JOB_HISTORY**, **JOBS**, **DEPARTMENTS** and **LOCATIONS**. Each table has a few rows of sample data. The following diagram shows the tables for the HR database:

SAMPLE HR DATABASE TABLES

NOTE: This lab requires you to have all 5 of these tables of the HR database populated with sample data on Db2. If you didn’t complete the earlier lab in this module, you won’t have the tables above populated with sample data on Db2, so you will need to go through the lab below first:

- [Hands-on Lab : Create tables using SQL scripts and Load data into tables](#)

Objectives

After completing this lab you will be able to:

- Perform different kinds of join operations

Instructions

When you approach the exercises in this lab, follow the instructions to run the queries on Db2:

- Go to the [Resource List](#) of IBM Cloud by logging in where you can find the Db2 service instance that you created in a previous lab under **Services** section. Click on the **Db2-xx service**. Next, open the Db2 Console by clicking on **Open Console** button. Click on the 3-bar menu icon in the top left corner and go to the **Run SQL** page. The Run SQL tool enables you to run SQL statements.
 - If needed, follow [Hands-on Lab : Sign up for IBM Cloud, Create Db2 service instance and Get started with the Db2 console](#)

Exercise

1. Problem:

Select the names and job start dates of all employees who work for the department number 5.

▼ Hint

Use the Inner join operation with the EMPLOYEES table as the left table and the JOB_HISTORY table as the right table.

▼ Solution

```
1. 1
2. 2
3. 3
4. 4
1. select E.F_NAME,E.L_NAME, JH.START_DATE
2. from EMPLOYEES as E
3. INNER JOIN JOB_HISTORY as JH on E.EMP_ID=JH.EMPL_ID
4. where E.DEP_ID = '5';
```

Copied!

▼ Output

▼

✔ --- Query1A --- select E.F_NAME,E.L_NAME, JH...

Run time: 0.01

Result set 1

Search

F_NAME	L_NAME	START_I
Alice	James	2001-08
Steve	Wells	2001-08
Santosh	Kumar	2000-08
Ann	Jacob	2016-08

2. Problem:

Select the names, job start dates, and job titles of all employees who work for the department number 5.

- Hint
- Solution
- Output

3. Problem:

Perform a Left Outer Join on the EMPLOYEES and DEPARTMENT tables and select employee id, last name, department id and department name for all employees.

▼ Hint

Use the Left Outer Join operation with the EMPLOYEES table as the left table and the DEPARTMENTS table as the right table.

▼ Solution

```
1. 1
2. 2
3. 3
1. select E.EMP_ID,E.L_NAME,E.DEP_ID,D.DEP_NAME
2. from EMPLOYEES AS E
3. LEFT OUTER JOIN DEPARTMENTS AS D ON E.DEP_ID=D.DEPT_ID_DEP;

E1007	Thomas	7	Design
E1009	Jones	7	Design
E1008	Gupta	7	Design

4. Problem:

Re-write the previous query but limit the result set to include only the rows for employees born before 1980.

▼ Hint

Use a WHERE clause and Left Outer Join operation. Alternatively, you could also use an INNER JOIN.

▼ Solution

```
1. 1
2. 2
3. 3
4. 4
1. select E.EMP_ID,E.L_NAME,E.DEP_ID,D.DEP_NAME
