# **SQL Cheat Sheet: Views, Stored Procedures and Transactions**

#### Views

| Topic         | Syntax  | Description   | Example   |
|---------------|---|---|---|
| Create View   | CREATE VIEW view_name AS SELECT column1, column2, FROM table_name WHERE condition;            | A CREATE VIEW is an alternative way of representing data that exists in one or more tables. | CREATE VIEW EMPSALARY AS SELECT EMP_ID, F_NAME, L_NAME, B_DATE, SEX, SALARY FROM EMPLOYEES;   |
| Update a View | CREATE OR REPLACE VIEW view_name AS SELECT column1, column2, FROM table_name WHERE condition; | The CREATE OR REPLACE VIEW command updates a view.  | CREATE OR REPLACE VIEW EMPSALARY AS SELECT EMP_ID, F_NAME, L_NAME, B_DATE, SEX, JOB_TITLE, MIN_SALARY, MAX_SALARY FROM EMPLOYEES, JOBS WHERE EMPLOYEES.JOB_ID = JOBS.JOB_IDENT; |
| Drop a View   | DROP VIEW view_name;  | Use the DROP VIEW statement to remove a view from the database.                             | DROP VIEW EMPSALARY;  |

## Stored Procedures in IBM Db2 using SQL

|                      |  |  | #SET TERMINATOR @ CREATE PROCEDURE<br>RETRIEVE_ALL |
|----------------------|--|--|--|
| Stored<br>Procedures | #SET TERMINATOR @ CREATE PROCEDURE<br>PROCEDURE NAME | A stored procedure is a prepared SQL code that you can save, so the code can be reused over and over again.  The default terminator for a stored procedure is semicolon(;). To set a different terminator we use SET TERMINATOR clause followed by the terminator such as '@'. | LANGUAGE SQL<br>READS SQL DATA                     |
|                      | LANGUAGE   |  | DYNAMIC RESULT SETS 1<br>BEGIN                     |
|                      | BEGIN  |  | DECLARE C1 CURSOR<br>WITH RETURN FOR               |
|                      | END<br>@   |  | SELECT * FROM PETSALE;                             |
|                      |  |  | OPEN C1;   |
|                      |  |  | END<br>@   |

## Stored Procedures in MySQL using phpMyAdmin

The default terminator for a ROLLBACK command is

| Stored<br>Procedures | DELIMITER //                    | A stored procedure is a prepared SQL code that you can save, so the code can be reused over and over again. | DELIMITER //                    |
|----------------------|---------------------------------|---|---------------------------------|
|                      | CREATE PROCEDURE PROCEDURE_NAME |   | CREATE PROCEDURE RETRIEVE_ALL() |
|                      | BEGIN                           |   | BEGIN                           |
|                      | END //                          |   | SELECT * FROM PETSALE;          |
|                      | DELIMITER;                      |   | END //                          |
|                      |                                 | such as \$\$ or //.   | DELIMITER;                      |

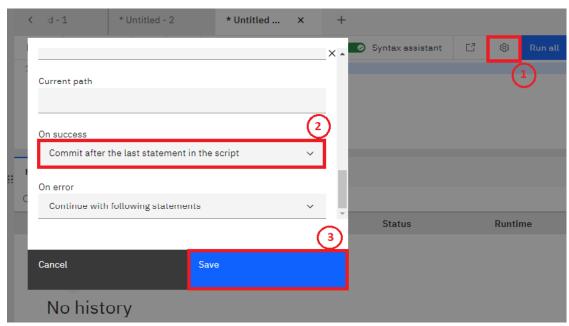

#### Ti

|                            |   | DELIMITER;  |
|----------------------------|---|---|
| Transactions wit           | th Db2  |   |
| Commit COMMIT; command     | A COMMIT command is used to persist the changes in the database.  The default terminator for a COMMIT command is semicolon (;). | CREATE TABLE employee(ID INT, Name VARCHAR(20), City VARCHAR(20), Salary INT, Age INT);  INSERT INTO employee( ID, Name, City, Salary, Age) VALUES( 1, 'Priyanka pal', 'Nasik', 36000, 21), (2, 'Riya chowdary' 82000, 29);  SELECT *FROM employee;  COMMIT;  |
| Rollback ROLLBACK; command | GA ROLLBACK command is used to rollback the transactions which are not saved in the database.                                   | As auto-commit is enabled by default, all transactions will be committed. We need to disable this option to see rollback works.  For db2, we have to disable auto-commit manually. Click the gear icon located on the right side of the SQL Assis window. Next, select the "On Success" drop-down and choose "commit after the last statement in the script" Remem save your changes! |

1/3 about:blank
